DATE

Dear Ms. Wörner,

My name is Philipp Meisinger, I am a 23-year-old student at the [42Wolfsburg](#) Software Engineering School in Germany. As so many of my peers I am deeply concerned about the future of our planet and stuck between frustration and hope. One of the reasons I decided to switch my profession from teaching to Software Engineering is that I believe in it being a very powerful tool, which can help us all to fight global warming and the breakdown of our ecosystems. Along the way peering into Data Science and Machine Learning with the '[Machine Learning Degree](#)' from OpenCampus.sh here in Kiel, I have picked up the aspiration, that one day I can put my new-learned skills as Software Engineer to good use.

In my time studying with 42Wolfsburg, I have gained in-depth knowledge on the C programming language, now stepping up the game to C++. An introduction to Data Science and Machine Learning with the amazing energy of OpenCampus.sh, I got a first-hand view into the setup of a Neural Network and its optimizations using the R programming language on a curated data set. As this field is a vast one and steadily shifting, I strive to learn ever more about its tweaks. In my current range of competences, I feel comfortable working on the preparation of data and generating insights. As a highly motivated person I am looking forward to deepening my knowledge even further on the role you are sourcing for and would be honoured to get the opportunity to do so. I am confident to be a suitable candidate for this position.

I would be honoured to realize an internship inside your organization as part of my studies at 42Wolfsburg. For any questions regarding the education, please do reach out. I am grateful for you having taken the time to read up until here already. If you have any questions for me, please feel free to get in touch via email, LinkedIn, phone, or GitHub. I much appreciate your consideration and am looking forward to hearing from you.

Best regards,

Philipp Meisinger
